## 2K24

Team ID: **8c8405aa00**

Team Name: **CODING SHINERS**

Genius innovation leaves behind a legacy...

**PS Code: 170**

**Problem Statement :**

**Create a program - based application for food delivery within college campus from canteen. The application should allow students to browse the menus , place orders and provide feedback on the services.**

## **Solution:**

- \* The existing of the food ordering app was about delivering it in person through a specified person**
- \* The app designed by us is in means to reduce the queue standing in a very long line in the college canteen in a very short interval.**

**So we came up with the idea to reduce the queue.**

## Technology Stack:

### Technology Stack Used :

- \* ANDRIOD STUDIO** – Android Studio is specifically designed to facilitate the creation, testing, and devolepment of Android applications.
- \* HTML** – It is used to create different pages such as home page, cart page, user profile etc.,
- \* PHP** – Php is certainly used for backend functionality like user authentication, order processing and database operations.
- \* CSS** – It is certainly used to style the html elements.
